Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 36-46 are rejected under 35 U.S.C. 102(e) as being anticipated by Nikolich (US Pat 6,853,680).

Regarding claim 36 and 38-46, Nikolich discloses an enclosed isolated chassis associated with an isolated circuit providing failure protection, wherein the chassis integrates multiple network applications, the architecture further includes power supply modules, plurality of output connections, external power, multiple ports, controller card and other modules/cards are "hot pluggable" or removable, and some cards have isolated supplies to maximize portions of the card and associated ports, and redundant isolated cards coupled to controller(Fi.g. 4, 16, 18, col. 3, line 35-67, col. 4, line 62-67, col. 9, 5-10).

Regarding claim 37, Nikolich discloses at least 5 slots (Fig. 4).

Allowable Subject Matter

1. Claims 1, 2, 4, 5, 7-9, 11-47 and 49-70 are allowed over prior art.
2. The following is an examiner's statement of reasons for allowance:

The prior art fail to teach or suggest fairly, with respect to claims 1 and 8, management unit coupled to control the multiplexer and the remote circuit, the management unit having a memory to store switching data, with respect to claim 11, a controller card coupled to control the plurality of relays, wherein the control card is coupled to receive control signals from management unit, with respect to claim 22, the remote circuit having a switch relay for each standard transmission path, each switch relay is coupled to an associated standard transmission path, each switch relay having a first position to provide a connection to a subscriber and a second position to provide a connection to a redundant transmission path, with respect to claim 29, a management unit to control the output of the multiplexer and the relays, wherein when the management unit detects a line unit coupled to a faulty transmission line an output of the multiplexer assigned to the line unit coupled to the faulty transmission line is detected to an associated redundant line unit instead, with respect to claim 36, a remote shelf enclosure having a remote unit card having a remote unit removably coupled in the protection remote unit slot, a protection switching controller card having a protection switching controller removable coupled in the protecting switching controller slot, with respect to claim 47, replacing faulty transmission path with a plurality of relays at a remote circuit, with respect to claim 57, coupling the redundant transmission path to an end portion of the standard transmission path with errors at the remote circuit, wherein the signals directed to the standard transmission path with errors are routed around the standard transmission path, with respect to claim 66, a remote circuit including a remote protection remote unit card having a protection remote unit removable coupled in the protection remote unit slot and selectively coupling a protection switching controller in a protection controller slot, and selectively coupling a protection remote unit in a protection remote slot.
